

FLOCCULANT 2005

Modified polymer for water recycling

SAMRATTM

Samrat's Flocculant 2005 is a modified polymer that ensures maximum utilization of water for small scale stone fabricators that lack sophisticated water treatment apparatus. Flocculant 2005 is electrically charged to bond with solids suspended in a slurry, and in turn coagulates the solids into macroflocs that can be easily removed from the suspension through filtration or sedimentation.
